

At Sqooba we have the chance to create a culture of compassion that helps us to improve and to make a difference in our work lives. It is possible to help people, build up a business and enjoy work. How we approach our daily job and each other is as important as the work itself because the way we treat each other, the values we share, and the way we collaborate will shape us as people.

Join us at -> diver@sqooba.io

Front-End and Software Engineer

Join the culture (→ our values)

- Choose positivity and give a smile
- Show gratitude and practice humility
- Default to transparency
- Focus on self-improvement
- Don't accept status quo
- Seek first to understand, then to be understood
- Take time and reflect

Your contribution (→ what you will do)

As part of the engineering team, you will be designing, developing and operating the customer solutions. You will support the customers in designing and developing their batch and real-time applications. As a result, you will continuously improve the solutions by implementing new capabilities and features to further deliver value to the customers. You will collaborate with Product Owners, Data Engineers and Data Scientists to build Data Product frontends.

About you (→ Personality and Behaviour)

- Are passionate about data visualizations and web applications
- Enjoy using and participating in the development of open source applications
- Enjoy working with cutting edge software technologies and applying the latest paradigms
- Are eager to be an early adopter of emerging big data and web technologies
- Savor the challenges of making diverse technologies work through the entire stack
- Team player and self-starter with a positive attitude

Your Background (→ Education and Experience)

- Master Degree in Computer Science or similar educational level
- Experience with TypeScript and React (or other frameworks such as Vue.js or Angular.js)
- Experience with HTML/CSS/DOM/...
- Knowledge of design principles and architectural patterns
- Knowledge of continuous integration workflows and continuous delivery build pipelines (Git, Jenkins)
- Experience with agile development methodologies and also DevOps culture
- Delivering systems and features with top-notch quality, on time
- Fluent English, German or French would be a nice plus

Appreciated skills on top

- Experience with Java, Scala or Python
- Knowledge about User Experience
- Knowledge of Big Data technologies such as Hadoop, Kafka, Spark, Cassandra...

About us (→ Let's join forces)

Every company will be a data company. Sqooba AG is a Swiss-based start-up, building Switzerland's analytical solutions by providing data products on data streams.

This is a hands-on position with a wide variety of roles and responsibilities, ranging from designing and building extremely stable components and cutting-edge features, mentoring other engineers and helping companies to become much more data-driven.
